ROC

Control de puntos intermedios Construcción y configuración con ROC

Qué es ROC

- Dispositivo basado en Raspberry Pi
- Se trata de una computadora con una distribución de Linux ya preparada para manejar dispositivos Sportident, conexiones de red y envío de marcajes a un servidor propio

Hardware necesario

Conexión definitiva de elementos

Opciones de conexiones

- Para el marcaje de tarjetas Sportident
 - Estación con cable RS-232 + conversor RS-232 a USB de Sportident
 - Estación con cable USB
 - Dongle USB SRR (Short Range Radio)
- Para la transmisión de marcajes
 - Conexión cableada
 - Conexión a una Wifi
 - Conexión mediante modem 3G, 4G
- Para la alimentación eléctrica
 - A red eléctrica mediante enchufe y adaptador microUSB
 - A batería externa y adaptador USB-microUSB
 - Algunos dispositivos externos "roban" demasiada energía para el funcionamiento correcto del conjunto. Se puede conectar una batería adicional mediante un adaptador USB en Y (conector de color rojo de la imagen de la diapositiva anterior)

Proceso de configuración

- Construir el Raspberry, uniendo piezas
- Grabar imagen del ROC
- Conexión a Internet mediante cable, a un televisor mediante HDMI y enchufar
- El Raspberry se inicializa y actualiza. Finalmente aparece una dirección IP local y el nombre (newroc)
- En roc.olresultat.se aparece el newroc. Pulsar en Registrar; pide nombre de contacto, club, país, email y clave de acceso
- Editar el nuevo registro creado y darle un nombre en lugar de newroc
- Configuración para uso de Wifi: buscar la unidad, pulsar en configurar y escribir: SSID, clave, país

Descarga de imagen

- Una imagen es un fichero que contiene todo un sistema operativo (en este caso) con toda la configuración necesaria para arrancar el dispositivo y comenzar a funcionar
- Antes de poder utilizar un Raspberry Pi hay que bajar una imagen y grabarla en la tarjeta de memoria que se va a introducir en el dispositivo
- Para estos pasos se requiere de un PC
- Elementos: el fichero de imagen (se descarga desde el sitio de ROC), la tarjeta de memoria (microSD, mejor con 8GB), un programa de grabación de imágenes en tarjetas (en este caso, Etcher)

Sitio web para descarga de imagen

Download Radio Online Control image

Please add your name, club and country before downloading. It will give us some credit for our effort of creating the Radio Online Control.

| | ļ |
|----------------|---|
| Club: | - |
| Country: | |
| Download image | |

A few quick tip to get you going!

Don't connect a keyboard to the ROC, it will freeze the ROC!

It doesn't matter if you program your serial SI-masters with 4800 or 38400 bit/s in SIconfig.

Make sure that the SI-master is programmed with autosend. Extended mode doesn't matter, both with or without works. We recommend Extended mode though!

Copy the image to a 8 GB SD-card to avoid getting problems with fitting the image to the SD-card.

Release note latest version.

Download manual.

Grabación de imagen. Etcher.

BURN SD CARDS WITH ETCHER

In our Raspberry Pi 101 series, learn how to create Pi SD cards with Etcher

Etcher. Comienza la grabación

Etcher. Evolución del proceso

Primer arranque del ROC

- Conectado a un televisor mediante HDMI
- Se inicializa y muestra IP y nombre

Registro. Aparece el "newroc"

Configuración. Módem 3G, 4G

- A medida que evoluciona, la versión del dispositivo incorpora más módems para conexiones inalámbricas, lo que significa que la necesidad de configuración manual se reduce
- En mi caso y mi momento, modem de Vodafone. El modelo no estaba soportado, así que tuve que configurarlo. Es la parte más complicada de todo el proceso
- Lo pude hacer con estas instrucciones
 - https://voyager.lupomesky.cz/howto/raspi-4g-ap/
 - http://www.draisberghof.de/usb_modeswitch/
- Después de que el Raspberry tenga el módem bien configurado, hay que completar la configuración en el sitio web de ROC

Modem en ROC. Datos Vodafone

Varios montajes finales

- A) Estación RS-232, conversor RS-232 a USB, batería externa, módem Vodafone
- B) Enchufado, cableado, dongle SRR

Precios. Aproximado

- Faltaría añadir una indicación de precios. No sé si tengo bien apuntado, podemos refinar en base a lo siguiente, para un control:
 - SI-GSM: aproximadamente 500€, incluye: BSF8-SRR, SIGSM-DN con tarjeta SIM, tarifa de tx de datos (5 €/mes)
 - ROC: aproximadamente 65€, incluye: Raspberry, caja, batería externa, tarjeta microSD
 - Añadir precio de modem 3G ó 4G
 - Añadir precio de una estación:
 - Opción A: BSF8-SRR + dongle USB. Aproximadamente 192€
 - Opción B: estación BSM7-USB. Aproximadamente 108€
 - Opción C: estación BSM7-RS232 + conversor RS232 a USB. Aproximadamente 152€
 - CPI: la clave es usar un smartphone existente, por lo tanto de partida 0€
 - Añadir precio de cable USB-OTG: 2,5€
 - Añadir precio de una estación (como en el caso anterior), aunque con una opción adicional:
 - Opción D: control manual por parte de usuario, manejando la app del Smartphone para indicar dorsales a medida que visitan la estación
